Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-118, drawn to an in-plane switching mode active matrix type liquid crystal display device, classified in class 349, subclass 141.
- II. Claims 119-123, drawn to a method of manufacturing an in-plane switching mode active matrix liquid crystal display device classified in class 349, subclass 187.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product is capable of being made by a different process, for example, by a process different than etching to form a contact hole.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
